web-scale - /web 'skāl/ - noun - computing architecture

a new architectural approach to infrastructure and computing.

Nutanix leverages "Web-scale" principles throughout our software stack. Web-scale doesn't mean you need to be as big as Google, Facebook, Amazon, or Microsoft in order to leverage them. Web-scale principles are applicable and beneficial at any scale, whether 3-nodes or thousands of nodes.

There are a few key constructs used when talking about "Web-scale" infrastructure:

- Hyper-convergence
- Software defined intelligence
- Distributed autonomous systems
- Incremental and linear scale out

Other related items:

- API-based automation and rich analytics
- Security as a core tenant
- Self-healing

This book will cover these basics as well as the core architectural concepts.
